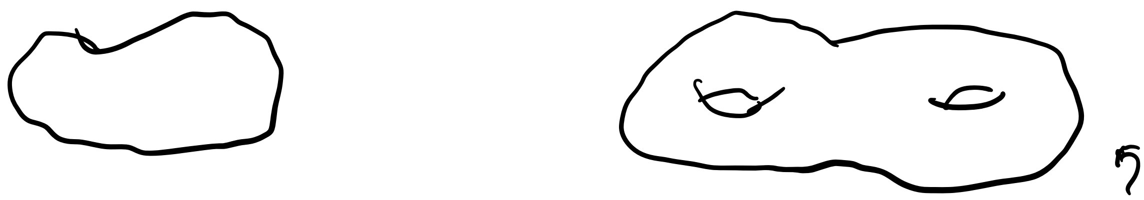
Hitchin fibrations and related combinatorics

PLAN

- Moduli space $\mathcal{M}_{n,d}$
- Hitchin fibration $\chi \downarrow$
- $\chi^{-1}(a)$ BNR correspondence $\mathcal{A}_n$
- Intersection Cohomology $\mathcal{M}_{n,d}$

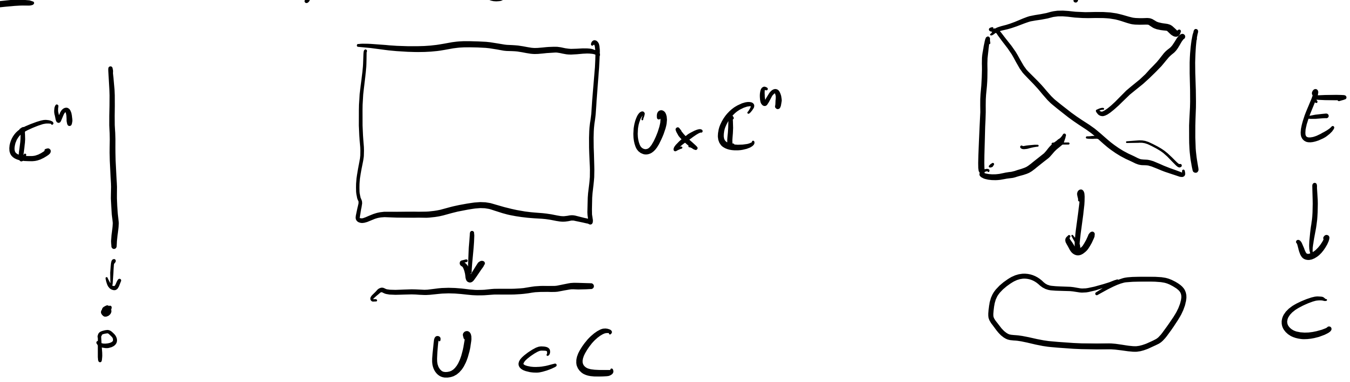
<u>SETTING</u> Let C be a smooth proj alg ~~curve~~/$\mathbb{C}$
(a Riemann surface)

$\mathbb{C}$ $\mathbb{R}$



genus of C $g \geq 2$ "number of holes"

<u>DEF</u> a vector bundle E over C of rank n



pointwise local global

Operations on vector bundles:

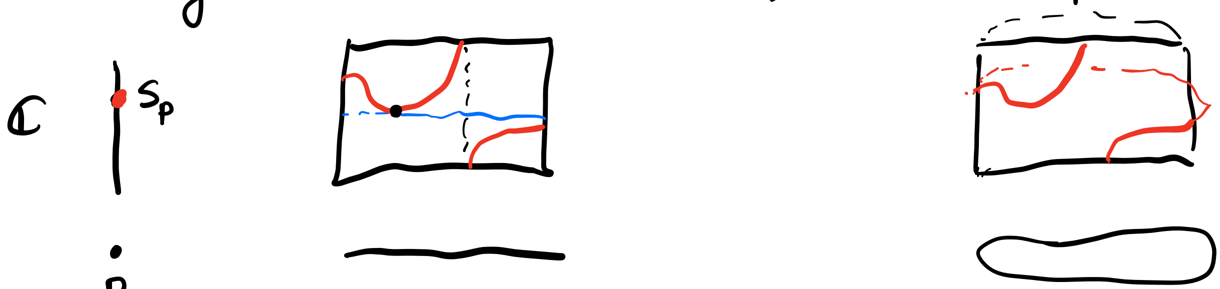
$\oplus$ direct sum, $\otimes$ Tensor product, dual, Λ^n exterior power
S^λ Schur functors

Eg $\Lambda^n E$ is a line bundle $\boxed{m=1}$
$\quad \overset{\shortparallel}{\det E}$

DEF Let L be a line bundle s a meromorphic section

$$\begin{tikzcd} L \arrow[d] \\ C \arrow[u, bend right, dashed, "s"'] \end{tikzcd}$$

$$\deg L := \# \text{zeros}(s) - \# \text{poles}(s)$$



p $\quad U \quad p \in C \setminus U$

$\deg = 2 - 1 + \dots$

EX $\deg(L)$ does not depend on the choice of s

DEF $\deg(E) := \deg(\det E)$

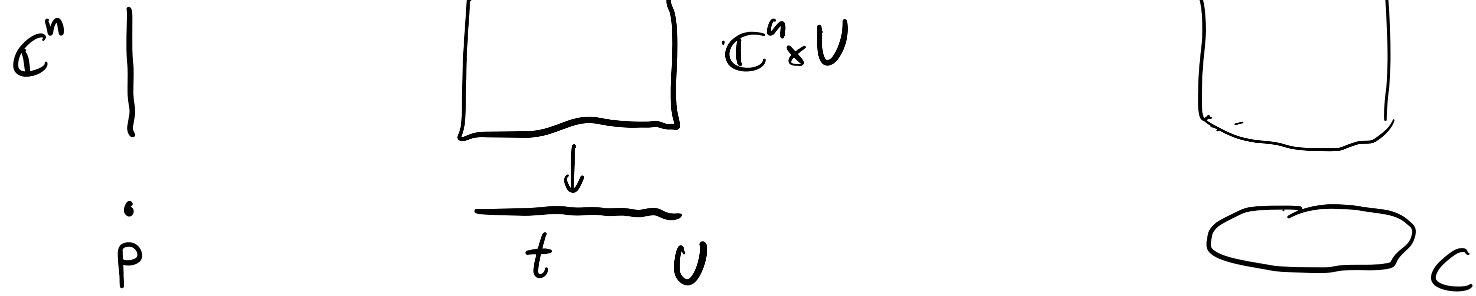
$\left(\deg E = \int_C c_1(E) \quad \text{first Chern class} \right)$

DEF Tangent bundle to X $(= C)$

T^*X be the cotangent bundle
$\overset{\shortparallel}{(TX)^\vee}$ $\qquad \omega_X := \det(T^*X)$ is called <u>canonical</u>

DEF A <u>Higgs bundle</u> is a pair (E, ϕ) where

$$\phi : E \longrightarrow E \otimes \omega_C$$



$\phi_p \in Mat_{n,n}(\mathbb{C})$

$\phi|_U$ has entries that depends on t

$U \simeq \mathbb{C} = \mathbb{A}^1$

$\phi|_U \in Mat_{n\times n}(\mathbb{C}[t])$

we glue together the local picture
The transition functions behaves "like" ω_C

GOAL DEFINE The moduli space of Higgs bundles

EX1 $GL_n \circlearrowleft Mat_{n\times n}$ by conjugation

$$Mat_{n,n}/GL_n = \{\text{Jordan normal forms}\}$$

endow with quotient topology

$$\begin{pmatrix} \lambda & 1 & & & & \\ & \ddots & \ddots & & & \\ & & \ddots & 1 \; t & & \\ & & & \ddots & 1 & \\ & & & & \ddots & 1 \\ & & & & & \lambda \end{pmatrix} \simeq J_{\lambda,n} \quad \text{for } t \neq 0$$

$n_1 + n_2 = n$

$t \to 0 \qquad J_{\lambda,n_1} \oplus J_{\lambda,n_2}$

$$\overline{GL_n\, J_{n,\lambda}} \ni J_{\lambda,n_1} \oplus J_{\lambda,n_2}$$

$\Rightarrow$ $Mat_{n,n}/GL_n$ is not separated (not T_2)

$A \in Mat_{n,n}$ define a closed point $[A]$ iff A is diagonalizable

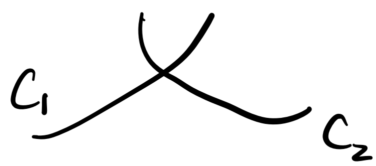
$$J_{\lambda,n} \equiv J_{\lambda,n_1} \oplus J_{\lambda,n_2}$$

$$\begin{tikzcd}
 & \mathbb{C}^{n_1} \arrow[d, phantom, "\cong"] & \mathbb{C}^{n} \arrow[d, phantom, "="] & \mathbb{C}^{n_2} \arrow[d, phantom, "\cong"] & \\
0 \arrow[r] & W \arrow[r] \arrow[loop below, "J_{\lambda,n_1}"] & V \arrow[r] \arrow[loop below, "J_{\lambda,n}"] & V/W \arrow[r] \arrow[loop below, "J_{\lambda,n_2}"] & 0
\end{tikzcd}$$

impose $V \equiv W \oplus V/W$

$\mathrm{Mat}_{n,n} /\!/ \mathrm{GL}_n$ is an alg var.

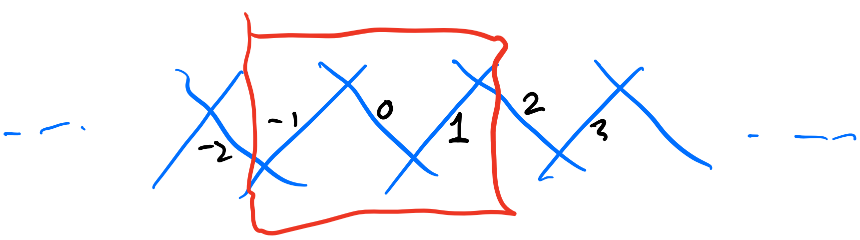
<u>Example 2</u> $C = C_1 \cup C_2$



$$\left\{ \begin{matrix}\text{rank 1 Torsion free sheaves} \\ \text{of degree } d\end{matrix} \right\} \Big/ \sim$$

$$\downarrow\!\!\downarrow \qquad F$$
$$\qquad\qquad \downarrow$$
$$\mathbb{Z} \qquad \deg(F|_{C_1})$$

$\deg(F|_{C_2}) = d - \deg(F|_{C_1})$



infinitely many irreducible components

is not of finite Type

<u>solution</u> Impose a stability condition

Eg $\deg(F|_{C_1}) \le d$

$$\deg(F|_{C_2}) \leq d.$$

DEF (E, ϕ) Higgs bundle

$(F, \phi|_F)$ is a <u>sub Higgs-bundle</u> if

$F \subseteq E$ is a sub bundle

and F is ϕ invariant

$$\mu(E) := \frac{\deg(E)}{\operatorname{rank}(E)} = \frac{d}{n} \in \mathbb{Q} \quad \text{\underline{slope} of } E$$

DEF $(E, \cancel{\phi})$ is (semi) stable ~~Higgs~~ bundle if

$\forall\ F \subset E$ sub ~~Higgs~~-bundle

$$\mu(F) < \mu(E)$$
$$(\leq)$$

DEF $M^{c}_{n,d} :=$ $\{$semistable Higgs bundle of rank n and degree $d\}$ / S-equivalence

$0 \to F \to E \to G \to 0$ s.e.s. of semistable Higgs bundles

$$\mu(F) = \mu(E) = \mu(G)$$

$\Rightarrow F \oplus G \equiv E$ S-equivalent

EX $\mu(F) = \mu(E)$ $F \subset E$ sub-bundle, E s.s $\Longrightarrow$

F is s.s. $\mu(E/F) = \mu(E)$ E/F is s.s.

REMARK. $\exists$ (E, ϕ) semistable s.t. E is not stable as vector bundle

- rank, degree are additive on s.e.s.

- $N_{d,n}^{C}$ moduli space of vector bundles

$\ni$ E a s.s. vector bundle

$$T_E^* N_{d,n} \simeq H^1(C, \mathrm{End}(E))^\vee \underset{\text{Serre duality}}{\simeq} H^0(C, \mathrm{End}(E) \otimes \omega_C) \ni \phi : E \to E \otimes \omega_C$$

$$T^* N_{d,n} \subseteq M_{d,n} \quad \text{open set}$$

$(E, \phi) \qquad (E, \phi)$

E is s.s. vector bundle $\Rightarrow$ $\forall \phi$ (E, ϕ) is s.s. Higgs bundle

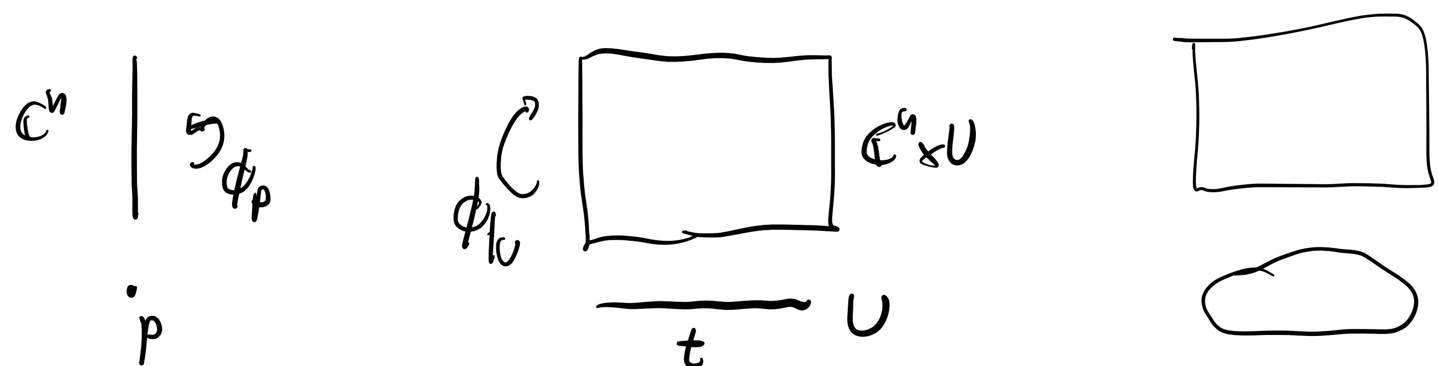
$$\dim M_{d,n} = 2 \dim N_{d,n} = 2n^2(g-1) + 2$$

- $M_{d,n}$ is non-compact, singular
- if $(d,n) = 1$ then $M_{d,n}$ is smooth

Ex $(d,n) = 1$ (E, ϕ) s.s.$^{\text{Higgs}}$ $\Rightarrow$ (E, ϕ) is stable$^{\text{Higgs}}$

Hitchin fibration

$(E, \phi) \rightsquigarrow \chi_\phi$ characteristic polynomial



$\chi_{\phi_p}(\lambda) \in \mathbb{C}[\lambda]$ $\qquad$ $\chi_{\phi|_U}(\lambda) \in \underset{\mathcal{O}(U)}{\underset{\parallel}{\mathbb{C}[t]}}[\lambda]$

"The entries of ϕ are sections of ω_C"

$\mathrm{Tr}(\phi) \in H^0(C, \omega_C)$ $\qquad$ $\det \phi \in H^0(C, \omega_C^{\otimes n})$

$$\chi_\phi(\lambda) = \lambda^n + s_1 \lambda^{n-1} + \dots + s_n$$

$$s_i \in H^0(C, \omega_C^i)$$

DEF $$A_n := \bigoplus_{i=1}^{n} H^0(C, \omega_C^{\otimes i}) \simeq \mathbb{A}^N$$

EX Use R.R. to prove $N = n^2(g-1)+1$

The Hitchin ~~fibration~~ map

$$\chi : M_{n,d} \longrightarrow A_n$$
$$(E, \phi) \longmapsto (\text{coeff } \chi_E)$$

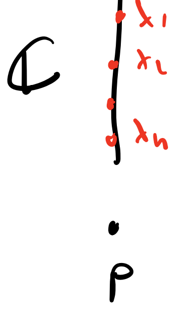
REMARK · $M_{n,d}$ is not projective, χ is surjective

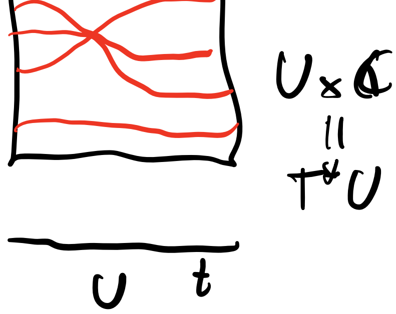
· χ is a proper map

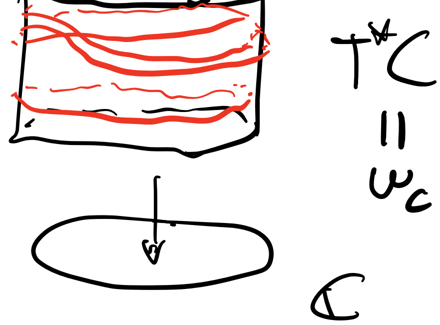
Goal $\chi^{-1}(a) = ? = \{(E,\phi) \mid \chi_\phi = q_a\}$

$a \in A_n$ $\qquad$ $q_a(\lambda) = \lambda^n + a_1\lambda^{n-1} + \dots + a_n$

q_a can be evaluated at points of T^*C







$$q_a|_p = \lambda^n + (a_1)_p \lambda^{n-1} + \dots + (a_n)_p \in \mathbb{C}$$

$$q_a|_U = \lambda^n + a_1(t)\lambda^{n-1} + \dots + a_n(t)$$

$$q_a = \lambda^n + a_1 \lambda^{n-1} + \dots + a_n$$

$\quad s \in H^0(C, \omega_C)$

<u>DEF</u> $C_a \subset T^*C$ $\qquad$ C_a = Zero locus of $q_a(\lambda)$

very singular

$$\begin{tikzcd} C_a \arrow[d] & T^*C \arrow[dl] \\ C & \end{tikzcd}$$

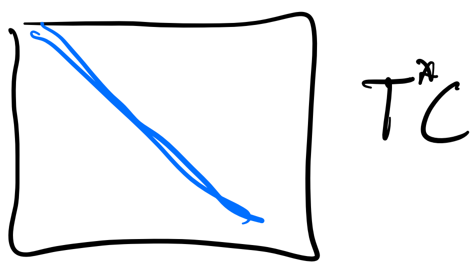
branched cover of degree n

C_a is called the spectral curve

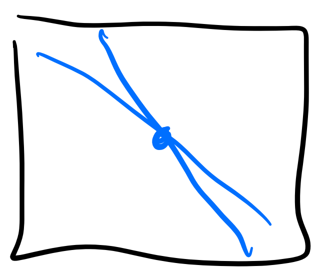
<u>EX</u> $\quad q_a = p_1^{k_1} \cdot p_2^{k_2} \dots p_r^{k_r}$

local

1 – $\lambda^2 + 2t\lambda + t^2 = (\lambda + t)^2$



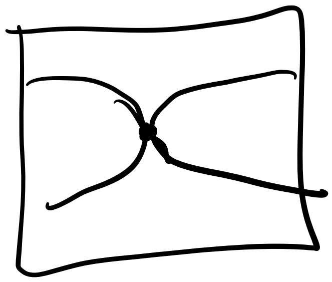
2 – $\lambda^2 + 3t\lambda + 2t^2 = (\lambda + t)(\lambda + 2t)$



3 – $\lambda^2 - t^3$

irreducible poly (curve)

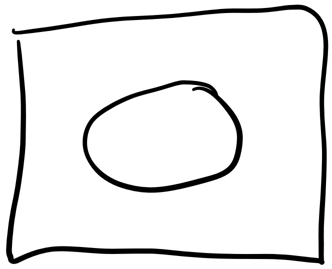
singular



4 – generic case

$\lambda^2 + t^2 - 1$

smooth and irreducible



$\chi^{-1}(a)$

$$M_{n,d} = \left\{ (E, \phi) \,\middle|\, \begin{matrix} \text{rk } n \\ \deg\ d \end{matrix} \right\}$$

$$\begin{array}{c} M_{n,d} \\ \chi \downarrow \\ A_n \ni a \end{array}$$

$$\begin{array}{c} C_a \subset T^*C \\ \downarrow \text{n-cover} \\ C \end{array}$$

EX C_a is smooth

$g(C_a) = n^2(g-1)+1$

Hint 1: adj formula & RR Thm

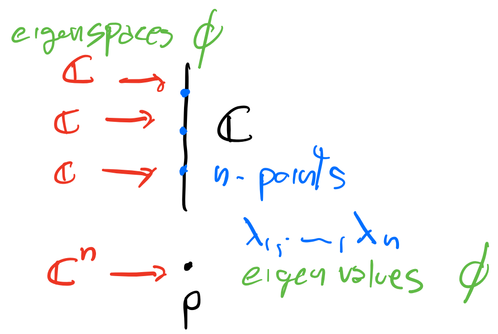
Hint 2: R-H Thm & resultant

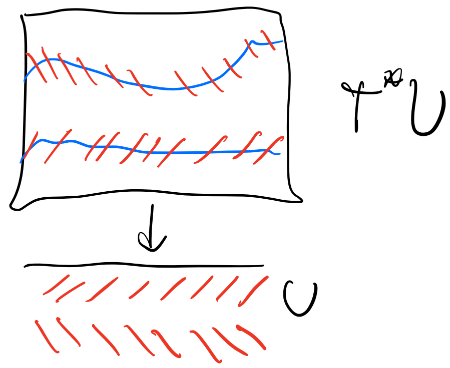
consider a s.t. C_a is smooth

L line bundle on C_a

$$\begin{array}{ccc} L & \longrightarrow & C_a \\ & & \downarrow \pi \\ \pi_* L & \rightsquigarrow & C \end{array}$$

$\nwarrow$ is a vector bundle





<u>FACT</u> . $\deg(\pi_* L) = \deg(L) - n(n-1)(g-1)$

$\Leftarrow \det \pi_* L = \mathrm{Norm}(L) \otimes \det \pi_* \mathcal{O}$

- There is a natural endomorphism on $\pi_* L$ is given by multiplication λ canonical section

$$\phi_p = \begin{pmatrix} \lambda_1 & & 0 \\ & \lambda_2 & \\ 0 & & \ddots \; \lambda_n \end{pmatrix}$$

<u>THM</u> Beauville Narasimhan Ramanan

if C_a is smooth Then

$$h^{-1}(a) \simeq J_{C_a}^{d+n(n-1)(g-1)} = \left\{ \begin{array}{l} \text{Line bundles on } C_a \\ \text{of degree } d+n(n-1)(g-1) \end{array} \right\}$$

$$(\pi_* L, \phi_L) \longleftarrow L$$

$$(E, \phi) \longmapsto \left((p, \lambda) \mapsto \text{gen eigenspace of } \phi_p \text{ associate } \lambda \right)$$

<u>COR</u> $\dim M_{n,d} = \dim A_n + \dim J_{C_a} = 2n^2(g-1) + 2$

Stratification of A_n

DEF $A_n^{red} \subset A_n$ $\qquad A_n^{red} = \{ \underline{a} \mid q_{\underline{a}} = p_1^{k_1} \cdots p_r^{k_r},\ k_j = 1 \}$

Combinatorics

Let Γ a graph on $[r]$

eg  $= \Gamma$

Let $T \vdash [r]$ $\quad T = \{T_1, T_2, \dots, T_k\}$

deleted graph $\Gamma_T = \left\{ e \in \Gamma \;\middle|\; \begin{array}{l} e : i - j \\ \exists\, k \text{ s.t. } i, j \in T_k \end{array} \right\}$

contracted graph $\Gamma^T = \Gamma / \Gamma_T \simeq \{ e \in \Gamma \setminus \Gamma_T \}$ on vertex set $[k]$

eg $T = 12|3$

$\Gamma_T =$  $\qquad \Gamma^T$ 
DEF a flat of Γ is $T \vdash [r]$ s.t.

every block T_i induces a connected subgraph

The flats are ordered by refinement

eg $T = 1|23$ $\quad \Gamma_T =$  $\qquad \Gamma^T =$ 

eg $\Gamma =$  The flats are 
Graphical Zonotopes

Γ be a graph

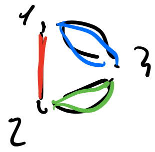
$$Z_\Gamma := \sum_{i,j} y_{ij} \underbrace{[e_i, e_j]}_{} \subseteq \mathbb{R}^r$$

Minkowsky sum

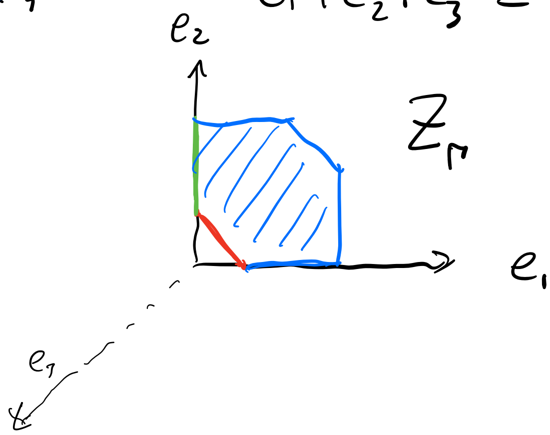
edges between i and j

segment between e_i and e_j

eg



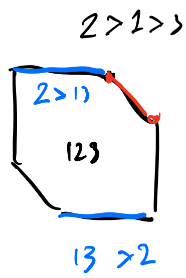
$e_1 + e_2 + e_3 = 5$



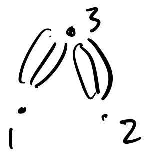
FACT • $Z_\Gamma = \left\{ (x_1, \dots, x_r) \;\middle|\; \begin{array}{l} \sum x_i = \sum y_{ij} \\ \forall K \subset [r],\ K \neq \emptyset \quad \sum_{i \in K} x_i \geq \sum_{i,j \in K} y_{ij} \end{array} \right\}$

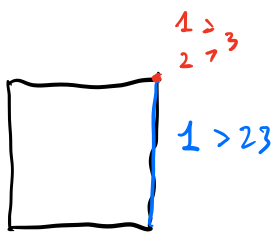
• $\{\text{faces of } Z_\Gamma\} \longleftrightarrow \left\{ (T, a) \;\middle|\; \begin{array}{l} T \text{ is a flat of } \Gamma \\ a \text{ is an acyclic orientation of } \Gamma^T \end{array} \right\}$

eg



eg





remark # lrr cap $\tau^{-1}(a) = C(Z_{\Gamma_{\underline{n}}} + w)$

$\Gamma_{\underline{n}}$ is the dual graph of C_a $\quad w = (w_i) \quad w_i = \frac{d n_i}{n}$

Ehrhart Theory

DEF $ehr_P(t) := \#(tP \cap \mathbb{Z}^r) \qquad t \in \mathbb{N}_+$

Eg $P = [0, \frac{1}{2}] \subseteq \mathbb{R}$

$$ehr_P(t) = \begin{cases} \frac{t}{2} + 1 & \text{if } t \equiv 0 \ (2) \\ \frac{t+1}{2} & \text{if } t \equiv 1 \ (2) \end{cases}$$

Thm [Ehrhart '62, Macdonald '71]

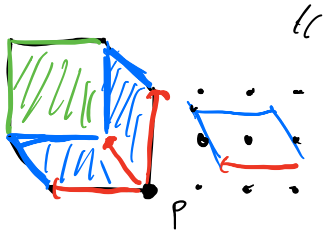
- if P has integral vertices then $\mathrm{ehr}_P(t)$ is a polynomial in t
- if P has rational vertices then $\mathrm{ehr}_P(t)$ is a quasi-polynomial
- if P is rational then

$$\mathrm{ehr}_P(-t) = (-1)^d \, \mathrm{ehr}_{\mathrm{Int}(P)}(t)$$

eg $P = (0, \tfrac{1}{2}) \subset \mathbb{R}$

$$\mathrm{ehr}_P(t) = \begin{cases} \frac{t}{2} - 1 & \text{if } t \equiv 0 \ (2) \\ \frac{t-1}{2} & \text{if } t \equiv 1 \ (2) \end{cases}$$

FACT "nice partition of Z_P into parallelepipeds"



$[0, 2e_1) \times [0, 2e_2) + e_2$

$$Z_P = Z_\emptyset \sqcup Z_1 \sqcup Z_2 \sqcup Z_3 \sqcup Z_{12} \sqcup Z_{13} \sqcup Z_{23}$$

$$\mathrm{ehr}_P(t) = \mathrm{vol}(P)\, t^{\dim P}$$ if P is an half open parallelepipeds

ThM [Stanley '91, Ardila-Beck-McWhirter '20]

Γ is a graph $w \in \mathbb{R}^r$

$$\mathrm{ehr}_{Z_\Gamma + w}(t) = \sum_{\substack{I \text{ forest in } \Gamma \\ \mathrm{AffSpan}(Z_{\Gamma(I)} + tw) \cap \mathbb{Z}^r \neq \emptyset}} \mathrm{Vol}(I)\, t^{|I|}$$

DEF a flat $T = \{T_1, T_2, \ldots, T_k\} \vdash [r]$ is w-integral, $k = e(T)$

$t = -1$ if $\forall i \quad \sum_{j \in T_i} w_j \in \mathbb{Z} \qquad w_i \in \mathbb{R}$

CoR $$C(Z_\Gamma + w) = \sum_{\substack{T \text{ w-integral} \\ \text{flat}}} (-1)^{r-\ell(T)} \sum_{\substack{F \text{ spanning} \\ \text{forest of } \Gamma_T}} \mathrm{Vol}(F)$$

Ex compute $\#(\chi^{-1}(a))$ for $a \in A_n^{red}$:
